

**FEEDBACK ON END YEAR WRITTEN EXAMINATION,
21 and 22 NOVEMBER 2022**

Student: 20239868 Sabiqul Hoque

The end of year written examination was designed to test your understanding of key areas related to the application of knowledge. These areas are important for you to know moving forward in your studies and for your future practice as a doctor.

The information below is designed to provide you with personalised feedback about key areas where you performed well (that is, answered correctly). It also includes recommendations for those areas you misunderstood (i.e. answered incorrectly). You should revise and engage in further self-directed learning in order to consolidate and improve your knowledge base.

All of these areas are likely to be tested again in future examinations as these are considered important for medical doctors to understand.

If you need to clarify your understanding of these areas, please discuss with your PBS tutor.

Feedback on key areas where you performed well
Supraspinatus injury
IM injection
Breast lump
Supplements and diabetes
Arterial occlusion
Diarrhoea
Thyroid investigations
HIV serology test
Cervical cancer pathogenesis
Multiple myeloma
Possible ectopic pregnancy
Diabetes confused patient
Cystic teratoma

Feedback on key areas where you performed well
Nipple discharge
Burkitt lymphoma
Intracranial bleeding
Chest pain red flags
Cocaine use
H2 receptor
Post-menopausal treatment
Substansia nigra pathology
Microcytic hypochromic anaemia
Anti-epileptic medications
Neural pathways controlling pupil
Febrile Convulsions
Tendon xanthoma

Feedback on key areas where you performed well
Breast screening statistics
Pulmonary HTN
Labour
Bipolar affective disorder
Restrictive lung disease
T-scores DXA
Boerhaave syndrome
Anophthalmia
Gut flora
Fever lipopolysaccharide
Median nerve compression
Cervical cancer histology
Wide-based gait
Subarachnoid haemorrhage
Pain management
Ovarian tumour aetiology
Radial nerve injury
Breast lump investigation
Pregnancy screening
Management of bilateral hip osteoarthritis
Foot numbness
Covid-19 vaccine
Acute otitis media
Muscle weakness

Feedback on key areas where you performed well
Percussion note resonance
Demyelination
Trochlear nerve
Tumour lysis
Lymphoma cell origin
Clinical SLE
Patient autonomy
Epididymo-orchitis
Lesser omentum structure
Syncopal episode
Patient advocacy
Appetite control
Meningitis in infants
T2DM predictor
Acute kidney injury
Pernicious anaemia
Cholecystokinin and pain
Dorsiflexion affected
Immune response COVID-19
Microscopic haematuria
Conditions present with dysphagia
Residential aged care home
Student behaviour
Hypertension complication

Feedback on key areas where you performed well
Testicular tumours
CI interpretation
Haemolytic anaemia
HIV testing
Acute leukaemia prognosis
Maxillary sinus
EBM design
Post COVID
Obesity medication
Indigenous relationships
Drug effect
Reactions to transfusion
Graves' disease
Renal biopsy
Phimosis child
Chicken pox
Gynaecomastia
Enlarged lymph node
Folic acid effect
Blood film
Muscarinic receptor antagonist

Feedback on key areas where revision is necessary
Confusion
Pelvic floor muscles
Coeliac disease
Thyroid physical examination
Diabetic neuropathy
Flesh coloured flat lesion
Hepatitis lab
Immediate side effect of ECT
BRACA1 mutation
Types of bone
Thiamine deficiency
Model of change
Specific phobia
Childhood obesity predictor
Articular cartilages
Borderline personality diagnosis
Sigmoid volvulus
Shoulder joint movement
Artery occlusion
Peak bone mass
Bear down delivery
Hypoxaemia
Afferent nerve activity
Mirtazipine

Feedback on key areas where revision is necessary
Pulmonary hypertension
Shigellosis
Pathology of the kidney
HIV screening
Melanoma in situ
Secondary erythrocytosis
Falciparum malaria
SNAP guidelines
Perineal haematoma
Consequences CKD
Haemorrhagic shock
Cause of hypotension
Comprehensive care standard
HIV virology
Interprofessional teamwork
Clinical Governance
QoL in elderly
Cause of hyperkalaemia
Covid-19 vaccine
Salbutamol mechanism of action 2
Primary survey
Melanoma genetics
Epidemiology malaria
Role doctor

Feedback on key areas where revision is necessary

MIST - trauma specific

Injury data AIHW

Prostate enlargement

Professionalism

Antiviral medication

Effects of teratogen

Drug interaction
